6. 

Jude buys a bicycle during the sale. If the original price was $500, how much does Jude pay?

Solution

Name: ..... Class: .....

Sale prices

1. 

Charles wants to buy a T-shirt originally priced at $50. How much will charles pay if he buys it during the sale?
Find the discount.
44% is the discount of the original price.
To find this, divide 44% by 100 and then multiply by $50.
= 44 ÷ 100 x 50
= 0.44 x 50 = $22
Find the sale price.
Sale price = original price - discount = $50 - $22 = $28
Therefore, Charles will pay $28.

2. Therefore, the sale price is $9.6.

3. Therefore, Sally paid $30 for her dress.

4. So, James paid $2.5.

5. So, the sale price is 2,720,000.

6. So, Jude paid $350.
