

Name: Class:

Multiply integers find the sign**Rules**

If both integers are either positive or negative, the product is always a positive number

$$(+5) \times (+3) = +15$$

$$(-5) \times (-3) = +15$$

Multiplying a positive and a negative integer, the product will always be a negative integer

$$(-5) \times (+3) = -15$$

$$(5) \times (-3) = -15$$

1. Is -5×6 positive or negative

- Positive Negative

2. Is 9×-8 positive or negative

- Positive Negative

3. Is 200×6 positive or negative

- Positive Negative

4. Is $5 \times (-3) \times 2 \times 4$ positive or negative

- Positive Negative

5. Is $(-15) \times (-5)$ positive or negative

- Positive Negative

6. Is -99×1 positive or negative

- Positive Negative
