

Name: Class:

Multiply three or more numbers up to 2-digits each

Example: solve the following.

$$21 \times 15 \times 5$$

Let's first start by multiplying the first 2 numbers.

$$21 \times 15 = 315$$

Secondly, we multiply 315 by the last number.

$$315 \times 5 = 1,575$$

$$\text{So, } 21 \times 15 \times 5 = 1,575$$

Follow the example above to solve the following expressions.

$$75 \times 20 \times 10$$

$$25 \times 10 \times 20$$

$$7 \times 8 \times 12$$

$$5 \times 3 \times 19$$

$$7 \times 6 \times 71 \times 9$$

$$9 \times 2 \times 26 \times 7$$

$$83 \times 47 \times 16$$

$$13 \times 32 \times 6$$

$$50 \times 22 \times 11 \times 22$$

$$20 \times 21 \times 33 \times 44$$

$$17 \times 9 \times 2 \times 59$$

$$26 \times 7 \times 1 \times 66$$

$$13 \times 92 \times 61$$

$$22 \times 14 \times 24$$

$$3 \times 37 \times 52 \times 19$$

$$4 \times 25 \times 12 \times 44$$

Name: Class:

Multiply three or more numbers up to 2-digits each

Example: solve the following.

$21 \times 15 \times 5 =$

Let's first start by multiplying the first 2 numbers.

$21 \times 15 = 315$

Secondly, we multiply 315 by the last number.

$315 \times 5 = 1,575$

So, $21 \times 15 \times 5 = 1,575$

Follow the example above to solve the following expressions.

$75 \times 20 \times 10$

15,000

$50 \times 22 \times 11 \times 22$

266,200

$7 \times 8 \times 12$

672

$17 \times 9 \times 2 \times 59$

18,054

$7 \times 6 \times 71 \times 9$

26,838

$13 \times 92 \times 61$

72,956

$83 \times 47 \times 16$

62,416

$3 \times 37 \times 52 \times 19$
